

# Java Comments

[< Previous](#)[Next >](#)

## Java Comments

Comments can be used to explain Java code, and to make it more readable. It can also be used to prevent execution when testing alternative code.

Single-line comments starts with two forward slashes ( `//` ).

Any text between `//` and the end of the line is ignored by Java (will not be executed).

This example uses a single-line comment before a line of code:

### Example

```
// This is a comment  
System.out.println("Hello World");
```

[Run example »](#)

This example uses a single-line comment at the end of a line of code:

### Example

```
System.out.println("Hello World"); // This is a comment
```

## Java Multi-line Comments

Multi-line comments start with `/*` and ends with `*/`.

Any text between `/*` and `*/` will be ignored by Java.

This example uses a multi-line comment (a comment block) to explain the code:

## Example

```
/* The code below will print the words Hello World  
to the screen, and it is amazing */  
System.out.println("Hello World");
```
